

Appl No. 10/659,035

Response to Office Action

Amendments to the Claims:

Please amend Claims 1, 2, 3, 6, 8, 9, 10, 13, 15, 16, 17, and 20, as shown in the Listing of Claims below.

Please cancel Claims 7, 14, and 21, as shown in the Listing of Claims below.

This Listing of Claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

1. (currently amended) A data processing apparatus comprising:

an acquisition unit for acquiring feature information of a printing medium set on a printing apparatus from the printing apparatus;

an input unit for inputting name information associated with a printing medium type; and

a registration unit for registering, in a relational manner, the feature information of the printing medium acquired from the acquisition unit and the information associated with the printing medium input via the input unit, in accordance with a manual registration instruction.

2. (currently amended) A data processing apparatus according to claim 1, wherein the information associated with the printing medium includes medium name-comprising:

an acquisition unit for acquiring feature information of a printing medium set on a printing apparatus from the printing apparatus;

Appl No. 10/659,035

Response to Office Action

a selection unit for selecting type information of the printing medium; and

a registration unit for registering, in a relational manner, the feature information of the printing medium acquired by the acquisition unit and the type information selected by the selection unit, in accordance with a manual registration instruction.

3. (currently amended) A data processing apparatus according to claim 1, ~~wherein the information associated with the printing medium includes medium type; further comprising a selection unit for selecting type information of the printing medium,~~

wherein registration by the registration unit is such that the feature information of the printing medium acquired from by acquisition unit, the name information associated with the printing medium input via the input unit, and the type information of the printing medium selected by the selection unit are related with each other.

4. (original) A data processing apparatus according to claim 1, further comprising:

a detection unit for detecting the printing medium type on the basis of the feature information of the printing medium acquired by the acquisition unit; and

a unit for setting a printing condition on the basis of the result of detection performed by the detection unit.

Appl No. 10/659,035
Response to Office Action

5. (original) A data processing apparatus according to claim 1, wherein the registration unit makes registration such that the feature information of a printing medium acquired by the acquisition unit, the information associated with the printing medium input via the input unit, and the information associated with print quality are related with each other.

6. (currently amended) A data processing apparatus comprising:
an acquisition unit for acquiring, from a printing apparatus, feature information of a printing medium set on the printing apparatus;
a display unit for displaying information associated with the type of the printing medium, in accordance with the feature information of the printing medium acquired fromby the acquisition unit;
a selection unit for selecting a printing medium type; and
a correction unit for making a correction such that the information associated with the printing medium type corresponding to the feature information of the printing medium acquired by the acquisition unit is replaced with the printing medium type selected by the selection unit, in accordance with a manual correction instruction.

7. (cancelled)

Appl No. 10/659,035

Response to Office Action

8. (currently amended) A data processing method comprising the steps of:

acquiring feature information of a printing medium set on a printing apparatus from the printing apparatus;

inputting name information associated with a printing medium type; and

registering, in a relational manner, the feature information of the printing medium acquired in the acquisition step and the name information associated with the printing medium input in the inputting step, in accordance with a manual registration instruction.

9. (currently amended) A data processing method according to claim 8, wherein the information associated with the printing medium includes medium name. comprising the steps of:

acquiring feature information of a printing medium set on a printing apparatus from the printing apparatus;

selecting type information of the printing medium; and

registering, in a relational manner, the feature information of the printing medium acquired in the acquisition step and the type information selected in the selection step, in accordance with a manual registration instruction.

Appl No. 10/659,035

Response to Office Action

10. A data processing method according to claim 8, wherein the information associated with the printing medium includes medium type, further comprising the step of selecting type information of the printing medium,

wherein registration in the registering step is such that the feature information of the printing medium acquired in the acquisition step, the name information associated with the printing medium input in the inputting step, and the type information of the printing medium selected in the selecting step are related with each other.

11. (original) A data processing method according to claim 8, further comprising the steps of:

detecting the printing medium type on the basis of the feature information of the printing medium acquired in the acquisition step; and

setting a printing condition on the basis of the result of detection in the detection step.

12. (original) A data processing method according to claim 8, wherein registration in the registration step is made such that the feature information of a printing medium acquired in the acquisition step, the information associated with the printing medium input in the inputting step, and the information associated with print quality are related with each other.

Appl No. 10/659,035

Response to Office Action

13. (currently amended) A data processing method comprising the steps of:

acquiring feature information of a printing medium set on a printing apparatus from the printing apparatus;

displaying information associated with the type of the printing medium, in accordance with the feature information of the printing medium acquired in the acquisition step;

selecting a printing medium type; and

making a correction such that the information associated with the printing medium type corresponding to the feature information of the printing medium acquired in the acquisition step is replaced with the printing medium type selected in the selection step, in accordance with a manual correction instruction.

14. (cancelled)

15. (currently amended) A computer-readable program comprising the steps of:

acquiring feature information of a printing medium set on a printing apparatus from the printing apparatus;

inputting name information associated with a printing medium type; and

Appl No. 10/659,035

Response to Office Action

registering, in a relational manner, the feature information of the printing medium acquired in the acquisition step and the name information associated with the printing medium input in the inputting step, in accordance with a manual registration instruction.

16. (currently amended) A computer-readable program according to claim 15, wherein the information associated with the printing medium includes medium name, comprising the steps of:

acquiring feature information of a printing medium set on a printing apparatus from the printing apparatus;

selecting type information of the printing medium; and
registering, in a relational manner, the feature information of the printing medium acquired in the acquisition step and the type information selected in the selecting step, in accordance with a manual registration instruction.

17. (currently amended) A computer-readable program according to claim 15, wherein the information associated with the printing medium includes medium type, further comprising a selecting step for selecting type information of the printing medium,

wherein registration in the registering step is such that the feature information of the printing medium acquired in the acquisitions step, the name information associated with the printing medium input in the inputting step, and the type information selected in the selecting step are related with each other.

Appl No. 10/659,035
Response to Office Action

18. (original) A computer-readable program according to claim 15, further comprising the steps of:

detecting the printing medium type on the basis of the feature information of the printing medium acquired in the acquisition step; and
setting a printing condition on the basis of the result of detection in the detection step.

19. (original) A computer-readable program according to claim 15, wherein registration in the registration step is made such that the feature information of a printing medium acquired in the acquisition step, the information associated with the printing medium input in the inputting step, and the information associated with print quality are related with each other.

20. (currently amended) A computer-readable program comprising the steps of:

acquiring feature information of a printing medium set on a printing apparatus from the printing apparatus;
displaying information associated with the type of the printing medium, in accordance with the feature information of the printing medium acquired in the acquisition step;
selecting a printing medium type; and

Appl No. 10/659,035

Response to Office Action

making a correction such that the information associated with the printing medium type corresponding to the feature information of the printing medium acquired in the acquisition step is replaced with the printing medium type selected in the selection step, in accordance with a manual correction instruction.

21. (cancelled)
